BuiltGreen™ BC Awards Recognizing Environmental Excellence

Since its launch in 2005, the BuiltGreen™ BC program has flourished. There are 2,868 registered homes, across BC, which save about 7,170 tonnes of greenhouse gases annually – the equivalent to removing 2,134 cars from BC roads annually. BuiltGreen™ BC has been taking a leadership position in bringing sustainable building practices to the province and numerous municipalities have been considering the program as one possible avenue to meet their 2020 Climate Change Action reduction goals.

To celebrate this excellence, BuiltGreen™ BC has launched the BuiltGreen™ BC Awards. “Previously we honoured leadership in BuiltGreen™ through our category partnership with provincial Georgie Awards®,” shares Vanessa Joehl, of BuiltGreen™ BC. “Due to the overwhelming growth and success of the program; however, we felt it necessary to

take the next step and launch a separate program just for BuiltGreen™ BC.”

And a good move it will be. The BuiltGreen™ BC Award has already been coveted by many builders across the residential industry. Just ask Fraser Valley BuiltGreen™ BC Builder and one of last year’s BuiltGreen™ Georgie Award finalists Domae Enterprises. Their project The Summit Residences sets an example of some of the highest standards of Environmental Excellence, “These homes have reached BuiltGreen™ BC Platinum,” shares Domae Enterprises Owner Kevin Chester. “We are very quality driven – that’s our key focus – so being recognized by a BuiltGreen™ BC supports what we do for our customers and the environment overall.”

There are nine award categories within the BuiltGreen™ BC Awards that not only

distinguish the highest energy efficiency standards, but also the most affordably constructed sustainable homes. Winners will be announced at the BuiltGreen™ BC Awards Gala in September. For more information on BuiltGreen™ BC go to www.chbabc.org or www.chbafv.com

BuiltGreen™
BRITISH COLUMBIA
British Columbia

Built Green™ BC is a voluntary program managed by the Canadian Home Builders' Association of British Columbia. With the aid of a Certified Energy Advisor and through specially designed Builder Training, builders are shown how to build a more energy efficient and comfortable home, saving energy costs for years to come.
